

Project Design Phase-I Solution Architecture

Date	15 October 2022
Team ID	PN120221MID06709
Project Name	Smaít Lendeí - Applicant Cíedibility Píediction foí Loan Appíoval.
Maximum Marks	4 Marks

Solution Architecture:

- The primary goal in the banking industry is to place their funds in safehands. So, the system needs to verify the documents effectively and should ensure that only capable people get the loan.
- The model should be trained to produce results with satisfactory accuracy, after which it produces accurate results as to whether a borrower should be lent money or not without any tedious manualwork.
- The users can get the results in the comfort of their home.
- The system should reduce risk to both the bank and the customer.
- The model can anticipate outcomes and is quickly adaptable to a widerange of inputs. Also, this strategy saves the banking industry and its staff a significant amount of time.
- The model should predict the results quickly and accurately.
